

OOPS IN REAL LIFE

Abstraction

with a laptop, you interact with the screen, keyboard, and mouse. You don't need to know exactly how the central processing unit (CPU) executes commands, how the memory stores data, or how the operating system manages everything. All those complicated technical details are abstracted, or hidden, from you.

Encapsulation

A bank can have many departments Loan Department, Accounts Department etc. All these departments together makes a Bank

Polymorphism

A women can be many things mother, writer, cook etc. same person can have different roles.

Inheritance

The Dogs can have same colour, same size, same name but they are not same they are identical.

Was it *helpful*?
